INPUT:
WikiArt:
75,921 paintings
PROCESS:
Metadata Integration
Title, Artist, Date, Style, School
FILTER:
Quality Control
File Verification
OUTPUT:
Verified Artworks
N = 74,234
Filtered Paintings + metadata
Emotion grounding:
human-written emotional utterances
Historical grounding:
Wikipedia pages
(Biographies, Historical Events)
Narrative (e^{narr})
Qwen3VL
Goal: Scene Composition
Formal (e^{form})
GalleryGPT
Goal: Art-Critical Analysis
Emotional (e^{emot})
Human annotations in ArtEmis
Goal: Affective Tone
Historical (e^{hist})
Model: ArtRAG
Goal: Cultural Context
Serial Filter Gate (1-4)
1. CJK Contamination: Remove failures
2. Perspective Length: >30 words
3. Length Truncation: 100 words
4. Duplicate Detection: Prevent collapse
Explanation Harmonization (+LLM)
Input: 4 Perspectives
Output: Unified Caption (eunif) ~ 150 words
Output MMArt data
(e^{narr},e^{form},e^{emot},e^{hist})
Image + 5 text Field
Task1: Perspective Complementarity
Task2: Multi Perspective Retrieval
Data foundation & Curation
Contextual data enrichment
Multi-perspective Generation
Synthesis & Quality control
Output & Benchmarking
